BE A PART OF THE CHANGE AND MAKE SOMEONE'S DREAM COME TRUE

Membership Goal

Double the active members in 10 years

- Retain existing active members
- Recognize and recruit Korean-American scientists, engineers, and entrepreneurs
- Reach out to next-generation and senior memberships
- Encourage memberships from social sciences and entrepreneurship
- Strengthen current and create new local chapters and branches
- Invite professional societies to be Affiliated Professional Societies of KSEA

Fund-Raising Goals

- Raise $5M in 5 years
- Increase funding with financial contributions from the U.S
  - KSEA has primarily relied on funding from Korea. The Korean-Americans must support the future generation of Korean-Americans. Double the endowment funds in 5 years, including scholarships, fellowships, Young Investigator grants, and awards.

Korean-American Scientists and Engineers Association

About KSEA

The Korean-American Scientists and Engineers Association (KSEA) was established in 1971 as a non-profit organization. It represents over 30,000 members engaged in science, engineering, entrepreneurship, and related fields from over 70 chapters and branches.

Vision

- Excel as a leading Korean-American scientific, engineering, and industrial organization
- Contribute to the social welfare and industrial development in the U.S. and Korea by promoting science and engineering

Mission

- Promote science, technology, and entrepreneurship for the general welfare of society
- Enhance the networking and collaboration among Korean-American professionals engaged in science, engineering, and related fields
- Foster international cooperation especially between the United States and Korea
- Cultivate Korean-American scientists and engineers to reach their full career potential
- Serve the Korean-American community

What We Do

- Organize international, national, and regional conferences
- Organize career workshops
- Recognize scientists and engineers through awards, scholarships, fellowships, and grants
- Publish reports of the global trends and future direction and projection of science and technology
- Host events that benefit the Korean-American community

- **For All KSEA Members,** KSEA organizes U.S.-Korea Conference (**UKC**) on Science, Technology, and Entrepreneurship. UKC is a world-class annual international conference with over 1,000 attendees. UKC offers unique opportunities for participants to actively engage in discovery, innovation, and dissemination through plenary sessions, diverse technical and professional development symposiums, and various forums. KSEA also organizes various webinars and regional and local chapter conferences throughout the year. KSEA recognizes outstanding achievements of its members through various awards, honors, research grants, fellowships, and scholarships.

- **For the Targeted Generation,** KSEA offers Young Generation Technical Leadership Conference (**YGTLC**) that allows early-career professionals and academics to exchange ideas and expand their networks within the science and technology community. Industry Meetup Program for Advancing Careers and Technical skills (**IMPACTs**) strives to create a peer-to-peer support system within industries, provides practical tools and insights on navigating the corporate world, and exposes students to industrial careers. Korean-American Mentorship and Leadership Immersion for Young Scientists and Technologists (**KATALYST**) aims to empower and equip undergraduate students with the knowledge, skills, and mindset needed to embark on a fulfilling journey towards leadership and personal growth. Fostering Innovation in Rising Experts (**FIRE**) provides professional development opportunities for young professionals and students. Scientists and Engineers Early Career Development (**SEED**) is an academic career development workshop that provides mentorship for senior graduate students, post-docs, and early career faculty members. KSEA also hosts Senior Forums for retired and senior members to provide a safe and supportive space, learn from each other, and share experiences with topics such as health and wellness, finances, and social activities.

- **For Entrepreneurs and IP (Intellectual Property) Policy Makers,** Innovation and Entrepreneurship Symposium (**IES**) provides a cooperative environment for current and future aspiring entrepreneurs in the U.S. and Korea. High-profile entrepreneurs and investors share the best practices of startups, from protecting your intellectual property and assets to securing funding from venture capitalists and government agencies. Science Technology Entrepreneurship Partners' Upscale Program (**STEP-UP**) promotes and enriches entrepreneurship and partnership activities among KSEA members and other stakeholders.

- **For STEAM Community,** KSEA hosts National Math and Science Competition (**NMSC**) that offers opportunities to challenge and inspire 4th-12th grade students and elevate their mathematical abilities, talents, and scientific innovations. ***i*-Drone** is a hands-on camp to build a small drone along with coding to learn and exercise basic concepts in automatic control, robotics, and unmanned aerial systems. Youth Science and Technology Leadership Camp (**YSTLC**) targets 8th to 12th graders and helps them discover their interest in STEM and feel they belong to the STEM community. KSEA **Art Contest** aims to inspire K-12 students to show their passion, imagination, and interests in science, engineering, and technology using artistic expressions.
