about **KSEA**

Korean-American Scientists and Engineers Association

재미한인과학기술자협회

A PREMIER TECHNICAL SOCIETY FOR

US-Korea Cooperation, Career Development & Community Service

about KSEA

The Korean-American Scientists and Engineers Association (KSEA) was established in 1971 as a non-profit national professional organization. It welcomes those who are engaged in science, engineering or related fields to achieve its mission goals.

The organization vision and mission are:

VISION

The organization objectives are to

- Promote the application of science and technology for the general welfare of society
- Foster international cooperation especially between the US and Korea
- Help Korean-American Scientists and Engineers develop their full career potential
- Serve the Korean-American Communities

MISSION

To provide, in the areas of science, technology and entrepreneurship, opportunities for

- International Cooperation
- Career Development
- Community Service

Currently, the KSEA has more than 78 chapters and branches, 37 affiliated professional societies and 16 technical groups covering all major branches of science and engineering. Since its founding, it has been recognized as the main representative organization promoting the common interests of Korean-American scientists and engineers.

KSEA promotes awareness of the rapid advances in science and engineering occurring inside and outside the United States. Today, it is helping create opportunities for the young generation by establishing lines of communication with other talented scientists and engineers in the United States and Korea.

Activities

Omni Orlando, Championsgate

August 5 - 8, 2026

“From Imagination to Innovation – Into Reality”

Organized by the Korean-American Scientists and Engineers Association (KSEA) in celebration of its 55th anniversary, the 39th US-Korea Conference on Science, Technology and Entrepreneurship (UKC) 2026 brought together leaders from academia, industry, government, and research institutions to advance global collaboration and innovation.

Under the theme “*From Imagination to Innovation – Into Reality*” UKC 2026 explored how scientific ideas and technological breakthroughs are transformed into real-world impact. Through plenary lectures, signature symposia, forums, and networking opportunities, the conference highlighted the critical roles of creativity, convergence, and collaboration in an era shaped by AI, data-driven science, and advanced technologies.

As KSEA’s flagship conference, UKC serves as a premier platform for sharing cutting-edge research, fostering U.S.–Korea partnerships, and nurturing the next generation of science and engineering leaders.

Activities

Past UKC Keynote and Plenary Speakers

William D. Phillips

Nobel Laureate in Physics
NIST Fellow and Distinguished University
Professor, University of Maryland

Chris A. Malachowsky

Co-Founder and Fellow, NVIDIA

Ji-Hyun Lee

Professor, Department of Biostatistics,
University of Florida

John C. Mather

2006 Nobel Prize in Physics,
Senior Project Scientist, JWST,
NASA Goddard Space Flight Center

Sung-Mo "Steve" Kang

Distinguished Chair Professor and Dean
Emeritus, University of California, Santa Cruz,
Chancellor Emeritus of UC Merced,

Liliana Maldonado

PE, BCEE, WEF Fellow,
Independent Consultant

Andrea Ghez

2020 Nobel Prize in Physics, Distinguished
Professor of Physics & Astronomy, UCLA

Daeyeol Lee

Bloomberg Distinguished Professor of
Neuroscience and Psychological and
Brain Sciences, Johns Hopkins University

Barry C. Barish

2017 Nobel Prize in Physics, Ronald and
Maxine Linde Professor of Physics, Caltech

Jeff Burke

Professor of Theater and Associate Dean for
Technology and Innovation, UCLA

Chuck Sheetz

Professor, Emmy Award-winning Animation
Director, UCLA

Daniel Lee

Professor, Cornell Tech
Executive VP, Samsung Research

Jong Sung Koh

President and CEO, GENOSCO Inc.

Lars Peter Hansen

2013 Nobel Prize in Economics,
David Rockefeller Distinguished Service
Professor, University of Chicago

Luke P. Lee

Professor of bioengineering and co-director of
the Berkeley Sensor & Actuator Center,
UC Berkeley

Dennis Hong

Professor of Mechanical and Aerospace
Engineering, UCLA

Simon Penny

Professor of Art, University of California, Irvine

Cherry Murray

Benjamin Peirce Professor of Technology and
Public Policy and Professor of Physics,
Harvard University

Activities

2026 KSEA YIG Award in Science

Dr. Jong Yeon Lee

The KSEA Young Investigator Grants (YIGs) intend to recognize those who have demonstrated outstanding early career development in science and/or technology. The YIG is KSEA's highest recognition given to young professionals who earned a doctoral degree in science or engineering and have been working in academia, industry, or government for no more than 6 years after the degree.

Up to two \$10,000 (USD) grants are awarded yearly, one in science and one in engineering, and the recipients are invited with travel support to the awards ceremony held during the UKC.

Honors and Awards Committee of KSEA also recognizes and honors those who have made outstanding contributions to KSEA, advances in science and engineering, international cooperation especially between the U.S. and Korea, and general welfare of the society.

Awards to be made are (a) Outstanding Contribution to KSEA Award (Award jointly with Minister of Ministry of Science and ICT (MSIT)), (b) Scientist of the Year Award (Award jointly with President of KOFST), (c) Engineer of the Year Award (Award jointly with President of KOFST), (d) Entrepreneur of the Year (Award jointly with Maeil Business Newspaper), (e) Outstanding Chapter and Chapter President Award, (f) Outstanding Community Service Award, and (g) Young Generation Leadership Award.

Honors to be made are (a) Distinguished Service Membership, (b) Distinguished Sponsor Membership, and (c) Honorary Membership to members at least 75 years old who have retired with a distinguished career.

Dr. Jong Yeon Lee is an Assistant Professor at the University of Illinois, Urbana- Champaign. He received his B.S./M.S. in Physics and Mathematics from the California Institute of Technology, Pasadena, in 2015. He earned his Ph.D. in Physics from Harvard University in 2020, under the supervision of Professor Ashvin Vishwanath.

Dr. Lee has received numerous accolades, including the AKPA Outstanding Young Researcher Award in 2022, the Gordon and Betty Moore Fellowship in Kavli Institute of Theoretical Physics, Santa Barbara, for 2020-2023, and the 2015 Richard P Feynman Prize. His prolific publication record exceeds 30 papers published in high impact journals including solo author paper in Phys. Rev. Lett. in 2025. He has given over 40 invited talks at very prestigious venues.

Dr. Lee's research is distinguished by its ability to turn abstract ideas from quantum information into concrete conceptual advances and experimentally relevant tools for open quantum systems. On the experimental front, he developed efficient decoding observables that make measurement-induced phase transitions accessible on existing platforms by linking entanglement criticality to classical post-processing protocols. On the theoretical front, he discovered strong-to-weak spontaneous symmetry breaking, a new phenomenon in open quantum systems that has opened a significant new research direction and drawn broad attention in the field. In particular, his theory offers a bottom-up route from microscopic dynamics to transport laws such as diffusion and sound, directly connecting microscopic models to measurable quantities in quantum devices. Furthermore, he has established an information-theoretic framework for nonequilibrium phases of matter, providing new ways to characterize phases ranging from quantum error- correcting codes under decoherence to noisy quantum resource states. Together, these advances provide algorithmic, diagnostic, and theoretical tools that bridge fundamental quantum information theory and the practical development of next- generation quantum technologies.

Activities

2026 KSEA YIG Award in Engineering

Dr. Junsoo Kim

Dr. Junsoo Kim is an Assistant Professor in the Department of Mechanical Engineering at Northwestern University. He received his B.S. and M.S. degrees in Mechanical & Aerospace Engineering from Seoul National University, Republic of Korea, in 2011 and 2013, respectively. He earned his Ph.D. in Materials Science & Mechanical Engineering from Harvard University in 2022, under the supervision of Professor Zhigang Suo.

Dr. Kim has received several Honors and Awards, including the Kavli Frontiers of Science Fellow (2024) from the National Academy of Sciences, Scialog Fellow (2024) from the Research Corporation for Science Advancement, two Scialog Awards (2024 and 2025), and the Haythornthwaite Foundation Research Initiation Grants (2025). His prolific publication record is significant over 38 papers published in top journals including Nature, Science, Advance Materials, Proceedings of the National Academy of Sciences, Matter, and Chemical Reviews.

Dr. Kim's research to reinforce the durability of soft materials has great potential to address grand challenges in our society such as polymer pollution and health care.

The impact of his study reaches fundamental science in soft matter, engineering of soft biomedical devices, and even traditional materials such as tires. In the past five years, he identified a novel design principle to greatly improve the fracture resistance of hydrogels and rubbers by engineering the molecular structure of polymer networks. He also showed how to apply this principle to various types of soft materials such as industrial polymers and natural polymers. Dr. Kim is a rising research star and leading scholar in the fracture of soft materials, a topic area that has drawn a large amount of interest due to its far-reaching impact and interdisciplinary characteristics.

Past YIG winners

Year	Recipient Name	Affiliation
2026	Jong Yeon Lee	University of Illinois, Urbana- Champaign
	Junsoo Kim	Northwestern University
2025	Wonjin Choi	Lawrence Livermore National Laboratory
	Sungmin Nam	University of Michigan
2024	Joonhee Choi	Stanford University
	Dohyung Kim	University of Pennsylvania
2023	Changrim Lee	Harvard Medical School
	Hyoyoung Jeong	University of California, Davis
2022	Jihye Park	University of Colorado at Boulder
	Kangwook Lee	University of Wisconsin-Madison
2021	Haegyeom Kim	Lawrence Berkeley National Laboratory
	Sangsik Kim	Texas Tech University
2020	Joseph Kwon	Texas A&M University
2019	Se Kwon Kim	University of Missouri
	Chi Hwan Lee	Purdue University
2018	Si Hong Park	Oregon State University
	Jung-Hun Seo	State University of New York at Buffalo
2017	Jiook Cha	Columbia University
	Aram Chung	Rensselaer Polytechnic Institute
2016	Seung Woo Lee	Georgia Institute of Technology
2015	Seok Kim	University of Illinois Urbana-Champaign
2014	SungWoo Nam	University of Illinois Urbana-Champaign
	Young Shik Shin	University of California, Los Angeles
2013	Deok-Ho Kim	University of Washington
	Jin-Oh Hahn	University of Maryland
2012	Cheol-Hwan Park	The Robert Bosch Research & Technology Center
	Jongho Lee	University of Pennsylvania
2011	Daeyeon Lee	University of Pennsylvania
	Inchan Kwon	University of Virginia

Activities

IMPACTs

In today's fast-paced, hybrid, and cross-functional work environments, the ability to connect meaningfully and communicate effectively is more critical than ever. IMPACTs 2026, held May 8–10, 2026, in New Orleans, Louisiana, embraced this reality with the theme “*Empowering Connections: Navigating Modern Team Dynamics*.” The conference explored the evolving landscape of interpersonal and soft skills, equipping professionals with the tools to collaborate across disciplines, bridge communication gaps, and foster inclusive, high-performing teams. Whether attendees were seasoned leaders or emerging contributors, the event helped them sharpen the human skills that drove innovation and cohesion in modern organizations.

The conference featured a dynamic mix of interactive programming designed to engage and inspire. Attendees participated in hands-on workshops, roundtable discussions, and breakout sessions focusing on conflict resolution, active listening, and translating technical jargon for non-technical audiences. These sessions were designed to be practical, reflective, and immediately applicable to real-world team challenges.

Anchoring the event was a lineup of keynote and plenary speakers—leaders, innovators, and change-makers who had navigated complex team dynamics in high-stakes environments. Through personal stories and hard-earned insights, they shared how they had built bridges across silos, led with empathy, and cultivated cultures of collaboration. Their experiences served as both inspiration and a roadmap for attendees seeking to elevate their own interpersonal impact.

Katalyst

Designed for Korean-American undergraduate students in STEM, Katalyst: Korean-American Mentorship and Leadership Immersion for Young Scientists and Technologists was a conference that provided a platform for mentorship, leadership development, career planning, and networking.

Katalyst 2026 was held in Los Angeles from February 27–March 1, 2026, under the theme “*Project You: Prototype Your Professional Journey*,” bringing together over 100 students, VIPs, speakers, and mentors. The program featured a plenary talk by Dr. Kevin Riutzel of Kheir Clinic, along with speaker remarks, a Tech Ethics Showdown, Project Ur Journey Pitch Session, mentorship sessions, a poster session, and a networking dinner. The “*Leadership Lab*” also brought together KSEA YG Group leaders from across the U.S. to connect, share experiences, and strengthen their leadership skills.

Participants were selected based on their past achievements, leadership potential, and future aspirations. Approximately 100 undergraduate student leaders and mentors attended.

In an effort to reduce the financial burden on individuals attending the event, we provided travel and meal support for selected program participants.

Activities

National Mathematics and Science Competition Art Contest

Events are Sponsored by OKA
(Overseas Koreans Agency) and Hanwha

Mathematics and science play an increasingly important role in our rapidly changing technological and scientific world. To challenge and inspire students and foster their interest and abilities in STEM, KSEA offers the National Mathematics & Science Competition (NMSC) for students in grades 3–11, as well as the National High School Physics Contest, jointly offered with the Association of Korean Physicists in America (AKPA), for students in grades 8–11. These competitions provide students with opportunities to develop their mathematical and scientific skills, explore their interests, and identify their potential in STEM fields. More information available at <https://nmisc.ksea.org/>

In addition to academic competitions, KSEA also encourages students to express their passion and creativity in STEM through the STEM Art Competition. Open to K–12 students, the contest offers a unique opportunity for young students to showcase their imagination, interests, and perspectives on science, engineering, and technology through art. Please visit the competition website for details on the artwork theme, contest rules, and submission requirements. More information available at <https://art.ksea.org/>

Activities

Scientists and Engineers Early-Career Development Workshop (SEED)

The Scientists and Engineers Early-Career Development (SEED) Workshop began in 2013 with the goal to provide professional career development service, which is consistent, systematic, and practically useful for junior Korean-American scientists and engineers ranging from postdoctoral researchers to early career professionals.

The SEED program provides (1) Workshop on grant proposal writing for postdoctoral researchers and junior faculty members, (2) Information on funding opportunities within US, US-Korea collaboration, and other international opportunities, (3) Career workshop that focuses on the job application process, tenure, and promotion, (4) Workshop on being team member/leader in the modern workplace, (5) Development of supporting and mentoring systems, and the (6) Discussion on entrepreneurship and startup companies.

Past speakers were outstanding and distinguished scholars and professionals with successful careers in the United States.

Testimonials from SEED workshops:

"First, thanks a lot for the efforts to organize this great event! I enjoyed all the moments. The Korean-American networking was really unique and strongly helpful for folks preparing faculty careers." - Postdoc from Illinois

"This program provided a rare opportunity to interact closely with faculty mentors and ask questions about the academic career path." - Graduate student from California

"Hearing the mentors' career journeys helped me gain a clearer vision of my own future in academia." - Graduate student from New Jersey

"SEED is truly a unique platform for mentorship, networking, and professional development." - Graduate student from Pennsylvania

"I loved networking with people from various fields! This would not be possible anywhere else other than SEED!" - Graduate student from Indiana

Activities

Undergraduate and Graduate Scholarships

KSEA scholarships are to recognize outstanding students with Korean heritage who excel in academics as well as in services to the community, and have demonstrated a potential to become future leaders of the society.

Two categories in the scholarship are the (1) KSEA Scholarships for Undergraduate Students in the United States and (2) KSEA-KUSCO Scholarships for Graduate Students in the United States.

The objective of the “*KSEA Scholarships for Undergraduate Students in the US*” is to recognize outstanding undergraduate students in the United States who excel in academics as well as in services to the community, and have demonstrated a potential to become future leaders of the society for closer cooperation between the U.S. and Korea. There are 20 scholarship \$1,500 each.

The objective of the “*KSEA-KUSCO Scholarships for Graduate Students in the US*” is to recognize outstanding graduate students in the United States who excel in academics as well as in services to the community, and have demonstrated a potential to become future leaders of the society for closer cooperation between the U.S. and Korea. There are 20 scholarship \$2,000 each.

KSEA provides Postdoctoral Fellowships to recognize outstanding postdoctoral fellows in the United States who demonstrate excellence in academics and research. Each year, KSEA selects five postdoctoral fellowship awardees, with each recipient receiving a \$2,500 award.

Activities

KSEA-KOFST Next Generation Alumni Forum

The KOFST YGF·YPF Alumni Forum, held as part of the 2026 UKC (U.S. - Korea Conference on Science, Technology, and Entrepreneurship), was organized and conducted under the theme **"Roots & Reach."** The forum brought together past YGF·YPF participants to share their personal and professional growth while creating meaningful connections to strengthen the KSEA alumni network for future generations.

The program consisted of opening remarks, participant introductions and Core Memory sharing, 2026 conference presentations, an open discussion on global citizenship, and a closing letter-writing activity titled **"A Letter to Future Participants."** Throughout the sessions, participants demonstrated a high level of engagement and actively contributed to the discussions.

Testimonials from program participants:

"You never know how the person sitting next to you might impact your future."

"Confidently know that you will find a sense of belongingness at KSEA."

"Talk to everyone you see, even in the elevator — you never know who you will meet!"

"You'll achieve great things through this community."

"KSEA is great for networking — good luck!"

*"Try something new. Make a new friend.
Work hard, play hard."*

Clara Kim, Chair

Forum Chair

"The notes you wrote today will be opened by someone next year. That is what makes this gathering more than just a conference—it makes it a community."
